AI agent for freight order intake

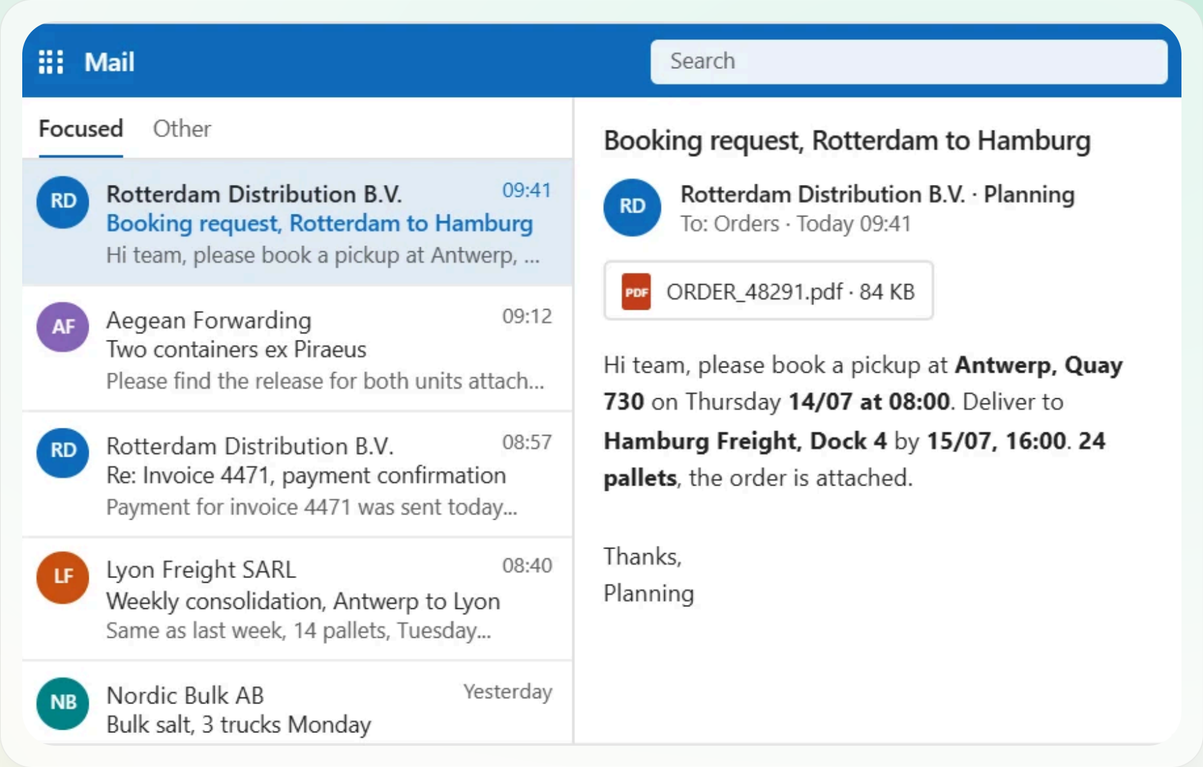

PETARON

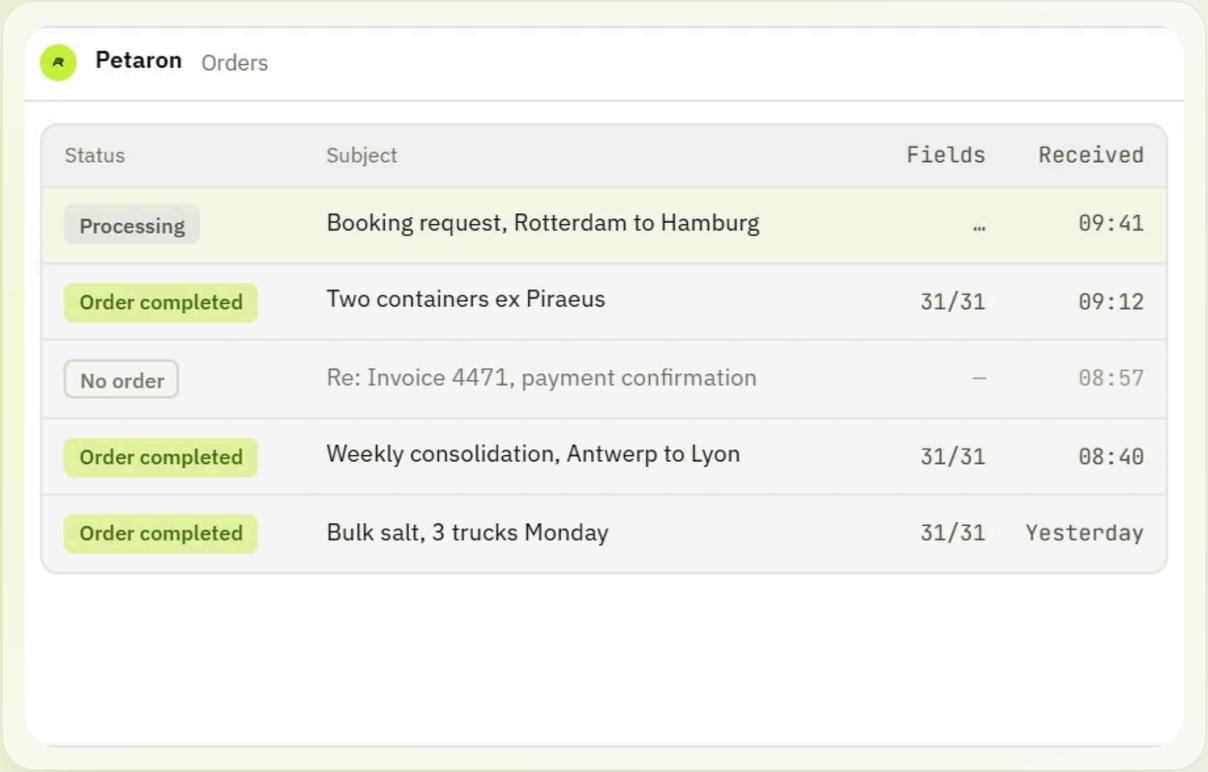

Order entry, done by an agent.

The problem

Orders still arrive as emails.

Someone opens each one, reads the attachments and retypes it into the TMS by hand. Hours of copy and paste, typos that show up later, orders that wait after hours.

What Petaron does

From inbox to a completed order.

An AI agent reads every email and its attachments, sorts orders from everything else and drafts the order before anyone opens it.

How it works

Four steps. One person in control.

01

Read

Every email and every attachment: PDFs, scans, spreadsheets, forwarded mail.

02

Understand

A new order, an update, a cancellation, or not an order at all.

03

Match

Customers and sites to your TMS codes, completed from your order history.

04

Approve

Your team checks the order beside the email, then it goes to the TMS.

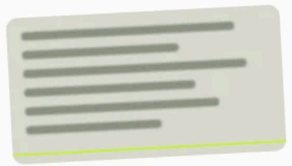

The product · 1 of 3

Every attachment gets read.

Scans, photos, PDFs, spreadsheets, Word files and forwarded mail, whatever they are called. Shared inboxes and SFTP drops land in one place.

Intelligent OCR

Scans, photos and poor-quality PDFs are read like typed text, tables included.

Gross weight
3,240 kg

Any file type

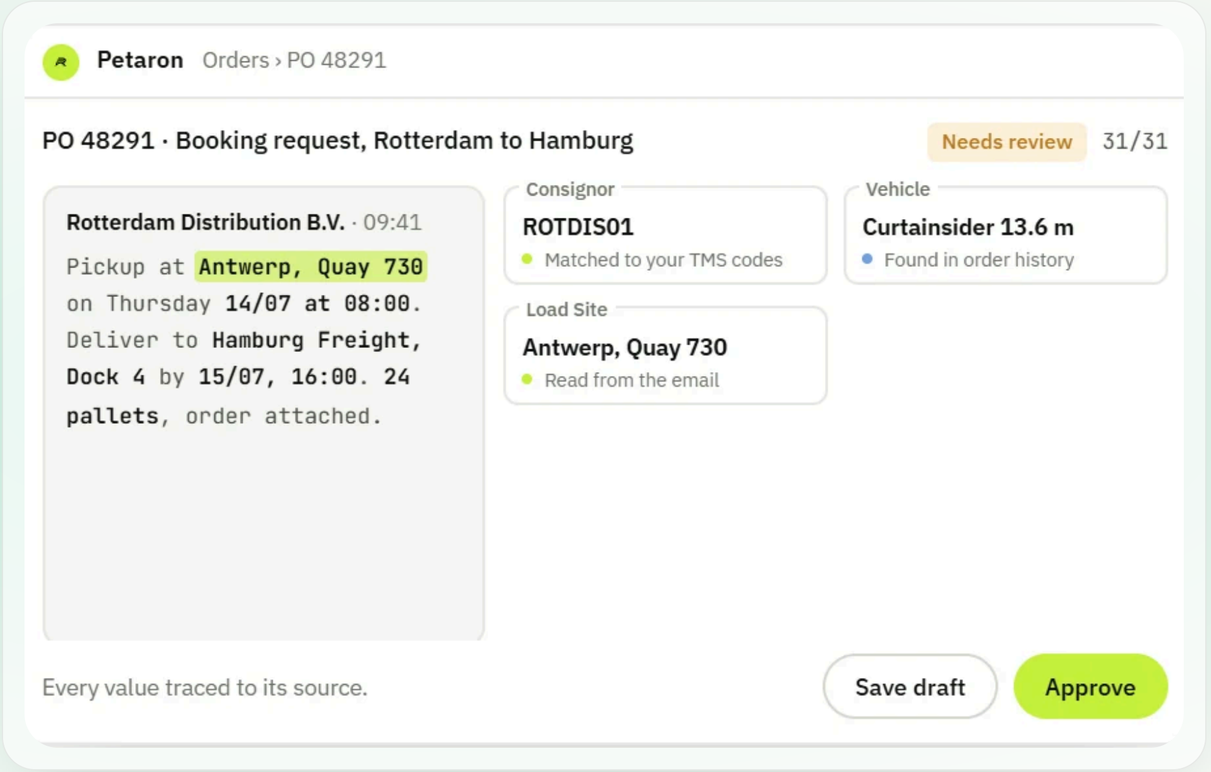

PDF, Excel, Word, images and forwarded threads. Whatever the attachment is called.

PDF XLSX DOCX
JPG EML CSV

Every source, one dashboard

Shared inboxes, forwarded mail and SFTP drops all land in one place, ready for your team.

The product · 2 of 3

Every value traced and matched.

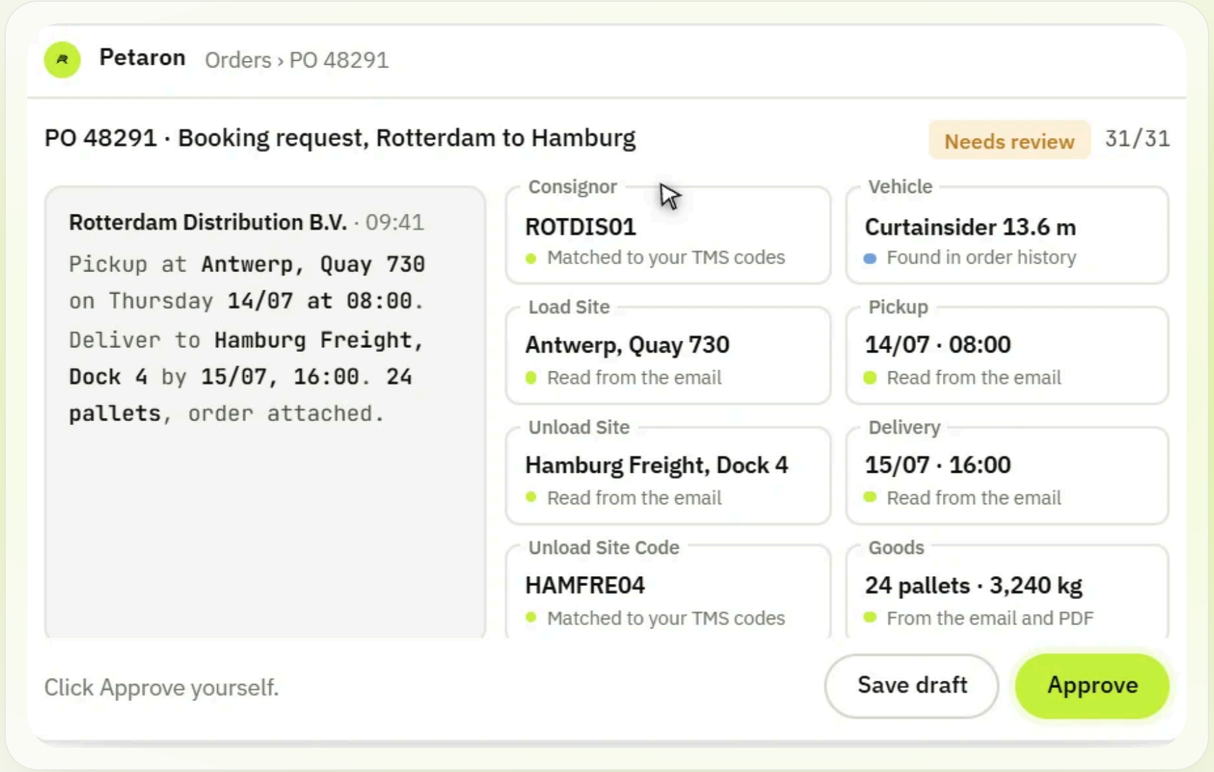

Each field shows the line it was read from. Customers and sites become your TMS codes, the rest comes from your past orders.

Anything uncertain is flagged for a person, never guessed.

The product · 3 of 3

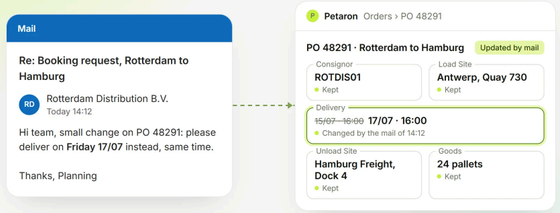

You approve.
Nothing moves before.

Review the order beside the email, save a draft or approve. Only approval sends the order to your TMS.

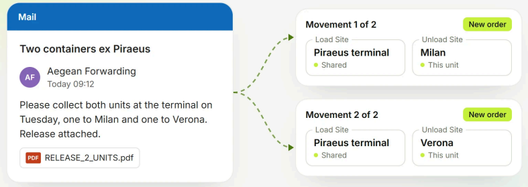

Why it works

Built for real order flows. Not demos.

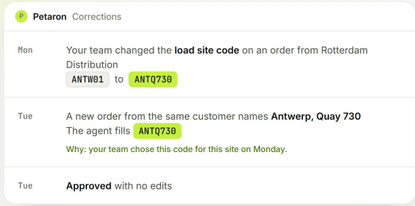

Updates land on the right order

A change later in the thread finds the order it is about.

One email, several orders

A mail that books several movements becomes one order each.

It learns from your team

A correction your team makes is used on the next order.

Where we are

Live. With a first customer.

First customer live

An intermodal operator runs its order mail through Petaron.

Measured on real orders

Every change to the agent is tested on the customer’s own mails first.

Your data, in the EU

EU-hosted, every customer’s data kept apart, every approval logged.

About us
